Introducing The Lil' Timber Patio Heater by Tyson Traeger

Wood Pellet Products owner Tyson Traeger is introducing The Lil' Timber Patio Heater for fall 2019. The Lil' Timber is designed for heating smaller outdoor spaces using clean and inexpensive wood pellets. Also new for fall 2019 is the new Griddle Top that turns the Lil' Timber heater into a fun, outdoor cooking surface.

"The Lil' Timber heater and Griddle Top were inspired by our customers. Several restaurants and brew pubs asked for smaller versions of the Big Timber patio heater to fit smaller areas," explains wood pellet entrepreneur Tyson Traeger. "The lighter design is more mobile for moving around decks, patios and yards. Now we are seeing the Lil' Timber being used for camping and tailgating."

Lil' Timber highlights include:

- Powered by inexpensive and clean wood pellets
- 10 Ft Heating Radius (72,000 BTU)
- Virtually No Smoke
- Non-Electric and Portable
- Safe Enclosed Flame
- Made in the Pacific Northwest
- Wt. 62 Lbs | Dim. 11 x 20 x 84"
- \$699 introductory price
- Available online at WoodPelletProducts.com

The Griddle Top attachment is an excellent cooking surface and can also be purchased at <https://woodpelletproducts.com/product/griddle-top/>

About Wood Pellet Products and Tyson Traeger

In 2011 Tyson Traeger followed in his family footsteps and became an entrepreneur, opening Wood Pellet Products. The company is based in Mt. Angel, a small farming community in Oregon's picturesque Willamette Valley. Oregon has a rich tradition in the wood products industry. As logging declined and sawmills closed, families like the Traegers became innovative and started new resource-based businesses. Wood pellets, made from sawdust, are an example of this innovation.

The Timber Patio Heater was Tyson's first commercial invention using wood pellets and has been followed by several new innovations.
